

INTELLIXIR System

Comes with 2 modules

easyLIXIR

Distribute your work...

experLIXIR

...Involve your experts

The end-users Interface of INTELLIXIR

To provide an appealing display of your INTELLIXIR System results
An interface dedicated to your end-users

EasyLIXIR is a 'user friendly' Interface. It is dedicate to the occasional users of the System and will allow you sending out the result of your work in an appealing and interactive way. Four "skins" are available to satisfy everyone's liking (or almost!).

Soon this Interface will be a report on-line distribute tool, allowing you to add by yourself the statistics, lists or pictures which you will want to share with your fellows at work

The INTELLIXIR Module Involving your Experts

To take the benefits of their proficiency
A module dedicated to your experts

ExpertLIXIR is a Module allowing you to involve your fellows at work about the rating and indexing documents, the ones specialists in a domain. ExpertLIXIR allows you to send sets of documents to your experts from a sub-database content or a custom field value. The Expert then get access to his own Expert Interface allowing him to rate fast the documents depending on their relevancy or their content

In more than a rate of relevancy, it's possible to ask to your Experts to manually index-link/categorize documents selecting some values from a custom field called « manual », i.e. the custom fields with none of a Boolean request inside/allocated to the value. That work could be then use for instance in deleting the set of documents owning a weak rate of relevancy, or analyzing the set of custom fields manually indexed by your Experts.
